

# Our First Toronto Project!

## *Goodmark 100kW<sub>DC</sub>*

Any day now, any minute, Toronto Hydro will confirm that our very first project in Toronto is feeding clean green solar power into the grid! We'll make the announcement as soon as it goes live on Facebook, and since it's our 20th project, be the 20th person to share the post and we'll send you a \$20 gift card to your favourite co-op! Make sure you like our page so that you're the first to know.

The "Goodmark" project will bring our portfolio to a total capacity of 925 kW DC. We recently visited the site in the industrial area of Rexdale and clambered up the side of the building during the final stages of construction. Members were blown away by the sight of 18,000 square feet of brand new modules. Led by Resco Energy workers, we toured the rooftop and saw first hand how our investments are spent. "It's not everyday that you get to see your dollars in action, but today I feel truly inspired to see what a little investment from a lot of people can do. You don't get that from the bank!" said member Kristen Corbet, laughing and shading her eyes from the bright sun beaming off the panels. The moment that Goodmark is connected to the grid new investments from SolarShare members will flow into it. President Mike Brigham announced "SolarShare and partners have worked very hard to get this project off the ground, and we're excited to see how well it's going to do. The last system we built, Ontario Street, is performing well above expectation." Stay tuned to find out!

Goodmark is the first co-op owned solar project in Toronto.
